HIGH TRANSCONDUCTANCE

DESCRIPTION AND RATING

The 5654 is a miniature sharp-cutoff pentode for use as a wide-band, high-frequency amplifier. It is also useful in video and audio amplifiers, oscillators, mixers, frequency multipliers, and cathode followers.

The 5654 is a special-quality tube intended for use in critical industrial and military applications in which operational dependability is of primary importance. Features of the tube include a high degree of mechanical strength and a heater-cathode construction capable of withstanding many-thousand cycles of intermittent operation. When used in on-off control applications, the tube will maintain its emission capabilities after long periods of operation under cutoff conditions.

Analysis of the electrical characteristics of this tube with those of the 6AK5 will indicate that the 5654 is essentially similar.

GENERAL

ELECTRICAL

Cathode—Coated Unipotential

Heater Voltage, AC or DC..... $6.3 \pm 10\%$ Volts

Heater Current.....0.175 Amperes

Direct Interelectrode Capacitances*

Grid-Number 1 to Plate, maximum.....0.02 $\mu\mu$ fInput.....4.0 $\mu\mu$ fOutput.....2.85 $\mu\mu$ f

*With external shield (RETMA 316) connected to cathode.

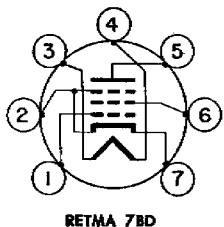

MECHANICAL

Mounting Position—Any

Envelope—T-5½, Glass

Base—E7-1, Miniature Button 7-Pin

BASING DIAGRAM

CHARACTERISTICS LIMITS

		Minimum	Maximum	
Heater Current				
$E_f = 6.3$ volts	Initial	160	190	Milliamperes
	500 Hr	160	190	Milliamperes
	1000 Hr	160	190	Milliamperes
Plate Current				
$E_f = 6.3$ volts, $E_b = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -2.0$ volts	Initial	5.0	11.0	Milliamperes
Screen Current				
$E_f = 6.3$ volts, $E_b = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -2.0$ volts	Initial	0.8	4.0	Milliamperes
Transconductance (1)				
$E_f = 6.3$ volts, $E_b = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -2.0$ volts	Initial	3800	6200	Micromhos
Transconductance Change with Heater Voltage				
Difference between Transconductance (1) and Transconductance at $E_f = 5.7$ volts (other conditions the same) expressed as a percentage of Transconductance (1)	Initial	15	Percent
	500 Hr	15	Percent
Transconductance Change with Operation				
Difference between Transconductance (1) initially and after operation expressed as a percentage of initial value	500 Hr	20	Percent
	1000 Hr	25	Percent
Average Transconductance Change with Operation				
Average of values for "Transconductance Change with Operation"	500 Hr	15	Percent
Plate Resistance				
$E_f = 6.3$ volts, $E_b = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -2.0$ volts	Initial	0.25	Megohms
Plate Current Cutoff (1)				
$E_f = 6.3$ volts, $E_{bb} = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -10$ volts, $R_L = 0.1$ meg	Initial	200	Microamperes
Plate Current Cutoff (2)				
$E_f = 6.3$ volts, $E_b = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -5.5$ volts	Initial	5.0	Microamperes
Interelectrode Capacitances				
Grid-Number 1 to Plate (g1 to p)	Initial	0.02	μuf
Input (g1 to h, k, g2, g3)	Initial	3.4	4.6	μuf
Output (p to h, k, g2, g3)	Initial	2.45	3.25	μuf
Measured with external shield (RETMA 316) connected to cathode.				
Negative Grid-Number 1 Current				
$E_f = 6.3$ volts, $E_b = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -2.0$ volts, $R_{g1} = 0.5$ meg	Initial	0	0.1	Microamperes
	500 Hr	0	0.1	Microamperes
	1000 Hr	0	0.1	Microamperes
Heater-Cathode Leakage Current				
$E_f = 6.3$ volts, $E_{hk} = 100$ volts	Initial	10	Microamperes
Heater Positive with Respect to Cathode	500 Hr	10	Microamperes
	1000 Hr	10	Microamperes
Heater Negative with Respect to Cathode	Initial	10	Microamperes
	500 Hr	10	Microamperes
	1000 Hr	10	Microamperes
Interelectrode Leakage Resistance				
$E_f = 6.3$ volts. Polarity of applied d-c interelectrode voltage is such that no cathode emission results.	Initial	100	Megohms
Grid-Number 1 to All at 100 Volts DC	500 Hr	50	Megohms
Plate to All at 300 Volts DC	Initial	100	Megohms
	500 Hr	50	Megohms
Vibrational Noise Output Voltage, RMS				
$E_f = 6.3$ volts, $E_{bb} = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -2.0$ volts, $R_L = 10,000$ ohms, vibrational acceleration = 2.5 G at 25 cps	Initial	150	Millivolts
Grid-Number 1 Emission Current				
$E_f = 7.5$ volts, $E_b = 120$ volts, $E_c2 = 120$ volts, $E_{cl} = -45$ volts, $R_{g1} = 0.1$ meg	Initial	0.5	Microamperes

The indicated 500-hour and 1000-hour values are life-test end points for the following conditions of operation: $E_f = 6.3$ volts, $E_b = 150$ volts, $E_c2 = 125$ volts, $R_k = 130$ ohms, $R_{g1} = 0.1$ meg, $E_{hk} = 135$ volts with heater positive with respect to Cathode, and bulb temperature = 165°C minimum.

SPECIAL TESTS AND RATINGS

Stability Life Test

Statistical sample operated for one hour to evaluate and control initial variations in transconductance.

Survival Rate Life Test

Statistical sample operated for one hundred hours to evaluate and control early-life electrical and mechanical in-operatives.

Heater-Cycling Life Test

Statistical sample operated for 2000 cycles to evaluate and control heater-cathode defects. Conditions of test include $E_f = 7.5$ volts cycled for one minute on and one minute off, $E_b = E_{c2} = E_{cl} = 0$ volts, and $E_{hk} = 135$ volts with heater positive with respect to cathode.

Shock Rating—450 G

Statistical sample subjected to five impact accelerations of 450 G in each of four different positions. The accelerating forces are applied by the Navy-type, High Impact (flyweight) Shock Machine for Electronic Devices or its equivalent.

Fatigue Rating—2.5 G

Statistical sample subjected to vibrational acceleration of 2.5 G for 32 hours minimum in each of three different positions. The sinusoidal vibration is applied at a fixed frequency between 25 and 60 cycles per second.

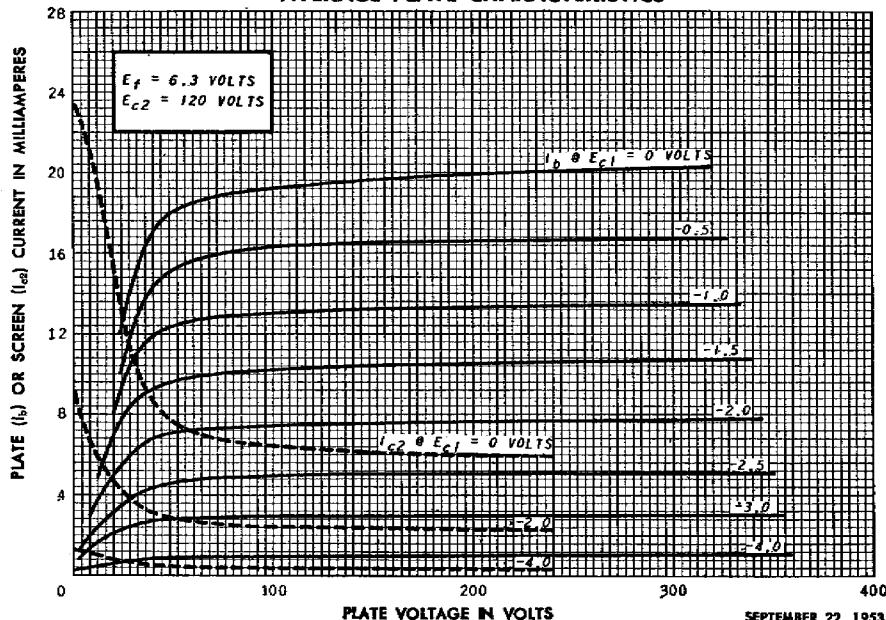

Altitude Rating—60,000 Feet

Statistical sample subjected to pressure of 55 millimeters of mercury to evaluate and control arcing and corona.

Note: The conditions for some of the indicated tests have deliberately been selected to aggravate tube failures for test and evaluation purposes. In no sense should these conditions be interpreted as suitable circuit operating conditions.

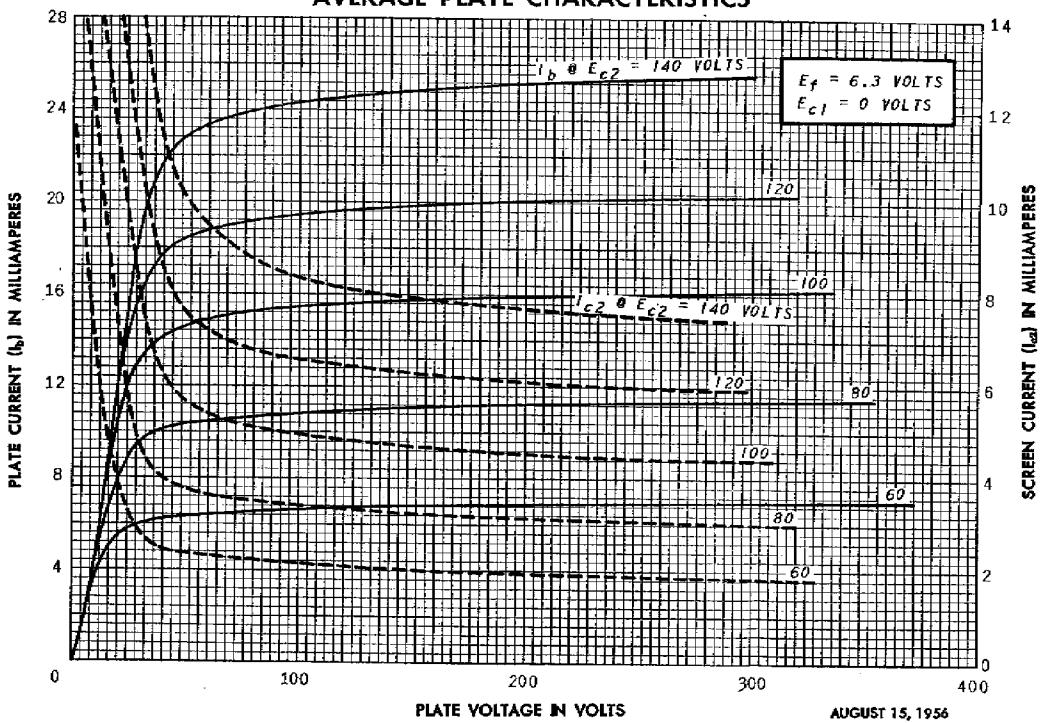

In the design of military equipment employing this tube, reference should be made to the appropriate MIL-E-1C specification.
